

Some Common Batch Error Messages

Error Message	Explanation
The input standard is not allocated for this building.	In this situation, check to see what the Standard for the serial number is. Cross-reference the Standard against the WO to ensure it is the correct Standard, because SnapTracker is saying it isn't. You will also get this message if all the allocated product for the specified Standard on the WO has already been delivered.
Work Order is not in delivery mode.	Work Order is not in delivery mode means that the WO for this record does not currently have a status in SnapTracker of WOT created. It could have a status of Open or Completed. Check if the status is open. If it is open, then you would need to create a new WOT for the remainder of the product. Once the WOT is created, you can edit the transaction for the new WOT number. If it is completed, then all the product should have been allocated to the WO. This could be an extra scan, and the record can be removed from the batch.
Standard Not found.	The Standard entered is not found for the selected Customer.
Location Not found.	The Location entered is not found for the selected Building.
Item Not found.	The serial number entered is not found for the selected Customer.
Item NOT found in Location.	The serial number entered is not found in stock.
Customer NOT found.	The Customer Number entered is not found in SnapTracker.
User XXX does not have access to To Building WHSE01. Unable to continue.	The user does not have access to the building in the batch.
WOT number does not exist!	SnapTracker cannot find the WOT number entered in the batch. Cross-check and correct the WOT number.

Error Message	Explanation
Company Code NOT found.	The Company Code entered is not found in SnapTracker. Update the Company Code in the batch.
Standard Id XXXX is Inactive. Unable to continue.	The Standard is set to inactive in the database. When a Standard is set to inactive, no movement can be performed. Ensure the correct Standard was used, determine if the Standard needs to be updated so that the record can be processed. If the incorrect Standard was used, enter the correct one.
The Serial No cannot be = Std Id.	If an Asset Standard, the serial number cannot be the same as the Standard. The serial number needs to be updated if the transaction should be Add Asset (AA). If the transaction should be Add Like (AL) the transaction type should be edited in the batch.
Building Not found.	The Building entered is not found in SnapTracker. Update the Building in the batch.
To-Building NOT found.	During a transfer – the building product is to be transferred to is not found in SnapTracker.
Standard Id NOT a Like-Item type.	The Standard entered is designated as an Asset type in SnapTracker.
Item found in Location.	During an Add - the serial number is already part of the existing inventory.
The Serial # exists but the Standard Id does not match.	There is an item record for the serial number entered in SnapTracker, but the Standard assigned in SnapTracker does not match what you are assigning during this transaction.
Some are Reserved or Committed.	During a transfer or delivery – If product is allocated on a work order or reservation, SnapTracker will not allow you to deliver out more than is currently available.
Standard Id Not an Asset type.	The Standard entered is designated as a Like Item type in SnapTracker.
