KITS PRODUCT CONFIGURATOR

Product Overview and Technical Specifications

THE KITS CONFIGURATOR

The KITS Configurator is a single-product configurator that provides customers with an intuitive, web-based interface to customize products. It simplifies the selection process by presenting available options in a clear and structured way. This helps users configure products to meet their specific requirements while reducing manual errors, speeding up decisions, and producing accurate, production-ready specifications.

PRODUCT OVERVIEW

The KITS Configurator is designed to simplify the customization and presentation of complex products. It allows both end customers and dealers to explore, configure, and understand product options with clarity and confidence.
By combining an intuitive interface with advanced visualization capabilities, the configurator improves decision-making and supports more effective sales conversations.

KITS Configurator

KEY FEATURES

Product Specification Sheets

Automatically generates detailed specification sheets based on user selections. These documents provide accurate, consistent references for orders, quotations, and technical reviews.

Augmented Reality Experience

Allows users to view configured products in augmented reality. This helps customers visualize products in real-world environments, increasing confidence and reducing uncertainty before purchase.

UI Customization

The interface can be customized to align with a client's brand identity. This creates a consistent experience across websites, dealer portals, and other digital touchpoints.

Primary Users

The primary users of the KITS Configurator are end customers and dealers.

Customers can personalize products to meet their needs, supported by clear specifications and visual tools that improve understanding. Dealers gain a practical sales tool to guide configuration discussions, share accurate product details, and streamline the ordering process.

Together, these users benefit from a solution that reduces complexity and improves communication throughout the sales journey.

TECHNICAL SPECIFICATIONS

- Web-based application
- Hosted on KITS servers
- Uses KITS APIs
- Compatible with all modern browsers that support JavaScript
- Compatible with desktop, tablet, and mobile devices

INTEGRATION

The configurator is lightweight and designed for easy integration into existing websites, dealer portals, or client-facing applications that support iframes. Embedding requires minimal technical effort, allowing for fast and scalable deployment.
